

MONITOR AFx[®] Photo Integration Package

- Unlimited Custom Badge Designs
- Print on any Windows[®] Compatible Printer
- Wide Array of Image Capture Devices
- Importing of Existing Photos

The Photo Integration Package expands the MONITOR AFx[™] product to include extensive photo badging capabilities. The Package allows the capturing of photos, badge design and printing on any Windows[®] compatible printer. Photo badges are typically ISO thickness PVC cards such as our G-ProxPhoto[™] or G-ProxTwin[™] proximity access cards.

All images are contained within the MONITOR AFx[™] database in a highly compressed format. This simplifies backup procedures and allows for a complete restoration of the entire system should the need arise.

The package can be purchased as a complete software solution, which allows you to keep your current investment in badging equipment, or as a complete badging workstation with printer and camera.

Unlimited Custom Badge Designs

Integrated with the powerful EPISUITE[™] GuardDraw application, badge designs are limited only by your imagination. Use company logos, bar codes, colored backgrounds and a variety of fonts to enhance your design. The design software allows placement of objects anywhere on the card and automatically links database fields back to MONITOR AFx[™].

Print on any Windows[®] Compatible Printer

Badges can be printed on any Windows[®] supported printer. This includes popular brands made by such companies as Fargo[®] and Datacard[®]. If you already have a badge printer that is Windows[®] compatible, there is no need to purchase another. For printing on PVC cards, a dye-sublimation printer is recommended.

Wide Array of Image Capture Devices

Any capture device (such as a webcam, digital camera or scanner) that is Twain compliant can be used to create photos. This provides a wide array of devices, which can be used for photo badging, such as small hand-held digital cameras all the way up to tripod mounted pan-tilt units. If it can be used under Windows, it can be used with this package.

Importing of Existing Photos

Any images that were taken previously can be imported from a file directly in the user form, eliminating the need to retake photos. This also provides the ability to obtain photos from remote offices via email and other means.

Specifications

Photo Integration Package

Capture Device Support

- Any Twain compatible
- WebCams
- Digital Cameras
- Scanners

Printer Device Support

- Any Windows[®] compatible
- Dye-sublimation
- Thermal Resin
