

# Security Solutions..Credit Unions

## Integrated Total Security Solutions

Product innovation and depth of knowledge position Chubb Security Systems as a single source for all electronic security requirements. Chubb provides integrated, single interface platforms to address intrusion detection, access control, panic / hold-up alert, fire monitoring, video surveillance, ULC-certified monitoring, and more.

## Our Business is Protecting Yours

Securing people, their businesses, and their homes since 1818, Chubb has been at the forefront of technology for as long as security systems have existed. Chubb products are relied upon worldwide to protect facilities and people in financial, commercial, and residential applications. We understand the security needs of Credit Unions through our many years of serving the financial community.

## Branch Protection Imperatives

Critical components of effective branch security include advanced alarm systems, physical security devices and digital video surveillance. The surveillance process involves storage of video images from CCTV cameras in a digital format, such as files on a computer hard drive. Image capture can be configured to record continuously, on a customized schedule, or only when events occur.

Beyond generating evidence of unwanted activity, the simple presence of cameras, monitors, and other security equipment can act to dramatically deter crime. Key considerations in the implementation of a Credit Union security solution include:

- Recording and controlling access to (and activity around) sensitive on-site assets such as vault areas, night depositories, cash dispensing units, counting rooms, and cash cages.
- Protecting and monitoring ABMs and ABM vestibules. In addition to the recording of movements and events surrounding the equipment, special tamper detection sensors can be installed to protect branch hardware.
- Generating a high resolution video log of activity in customer service areas including transactions at teller stations. As well, the use of entry door cameras and covert height strip cameras at exits optimizes the recording of movement of individuals into and out of the branch.

## ChubbVIEW

ChubbVIEW is the backbone of Chubb's digital video surveillance solution. The combined capture and reporting station is scalable and expandable to accommodate a wide variety of camera configurations, while integrated software allows remote PC access to video through networks, intranet, internet, or dial-up. Advanced watermarking technologies embedded in each video image prevent tampering of any form. Removable hard drives are available as an option to provide an extra degree of flexibility in satisfying requirements related to off-site storage and archiving.

Each ChubbVIEW application is customized to specific branch requirements through the appropriate selection of storage medium, camera arrangement, video capture rate, etc. As well, ChubbVIEW integrates with Chubb's Monitor AFx intrusion detection / access control system, yielding a single platform for electronic security requirements.

## The Value of Digital Recording

In addition to a safer, more secure branch environment, implementation of the proper security solution may favourably impact branch profitability. Advantages of a digital video solution include: cost savings through potential insurance relief, quick retrieval / accessibility of evidence, longer equipment life, and reduced VCR maintenance and eliminated video tape management.

## Chubb's... First in Security

Chubb's account management team is fully supported by highly trained engineering, installation, and service professionals. As a part of Chubb's global knowledge base, we are able to leverage a worldwide network of expertise and innovation while delivering the best in local care.

Continuing customer care includes 24 hour-a-day monitoring and response initiation services for all Chubb alarm systems in ULC-approved centres in key metropolitan areas across Canada. A selection of digital, cellular and high security signal communication options is available.

Chubb is your one stop for all electronic security requirements.

Each security system can be customized to meet a branch's individual security and cost requirements. Chubb's trained consultants can advise on the options available. For more information, please contact Chubb Security Systems at 1-800-878-2281.
