

DIGITALEYE...Digital Video Solutions

DigitalEYE

Chubb can help you keep an eye on your business even when you are away with our remote video solution.

Chubb's digital video solution:

- allows you to personally look in on the business
- provides you with a record of activity
- saves you time and money
- increases customer satisfaction and employee performance
- creates a safer environment

Our Business is Securing Yours

Securing people, their businesses, and their homes since 1818, Chubb has been at the forefront of technology for as long as security systems have existed. Chubb products are relied upon worldwide to protect facilities in commercial, financial, and residential applications.

We understand the security needs of your business. Chubb has cost effective, easy-to-use solutions that can accommodate your specific requirements.

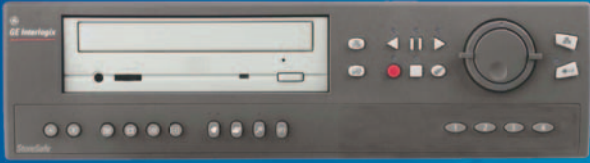

CCTV - Digital Recording

Video surveillance employs one or more cameras to maintain a record of activity in sensitive or problematic areas. Surveillance systems can also be used to remotely view areas of interest, to verify alarm signals and to deter unwanted actions and behaviors.

Digital Recording is a process that stores video from traditional CCTV cameras in a digital format, such as on a computer hard disk. Digital Video Recording offers numerous functional enhancements over traditional videotape, combining to make digital a truly cost effective alternative to conventional recording systems.

DIGITALEYE...Digital Video Solutions
